

# MATERIAL FINDINGS AND RECOMMENDATIONS:

## INSPECTOR SUMMARY OF MILESTONE PHASE 1 INSPECTION

Property Name: Hickory Grove Condominium Association  
Address: 9 Turner Street & 15 Turner Street, Clearwater, FL  
33756  
Inspection Date(s): 10/23/24  
Summary Date: 11/21/2024

### Inspection Findings and Recommendations:

- 1) No unsafe or dangerous conditions were observed. No substantial structural deterioration was observed. The building is in good structural condition. A Phase 2 inspection is not required.
- 2) 9 Turner—exterior guardrail at ground level, front entrance is loose, needs reattachment. Additionally, exterior electrical component housings, front/east elevation need replacement due to corrosion.
- 3) 15 Turner—Wood frame enclosures at front patios, front elevation require wood frame repair starting with Unit 5 outside corner.
- 4) 9 Turner—majority of balconies should have horizontal waterproof coatings removed and replaced to prevent corrosion-induced deterioration of concrete slab.
- 5) 9 Turner—elevator room is located below grade. Foundation walls are deteriorating due to long-term water intrusion. Walls may require repair, recommend inspection following scraping removal of paint and stucco on walls. Recommend below-grade waterproofing to prevent further deterioration.
- 6) In general, both of these buildings are due for an exterior painting and weatherproofing project which will repaint previously field-painted surfaces.
- 7) This is a summary. Review our full report for full details and recommendations.

Mr. Doug Seegmiller  
Hickory Grove Condominiums Association  
9 Turner St. & 15 Turner St.  
Clearwater, FL 33756

Re: Milestone Phase 1 Inspection: Hickory Grove Condominiums Association  
9 Turner St. & 15 Turner St.  
Clearwater, FL 33756

Dear Doug,

In accordance with your request, we tasked engineer Andrew Schrader with performing a Phase 1 structural inspection of the building, including an inspection of load-bearing walls, primary structural members and primary structural systems at Hickory Grove Condominium. Engineering Technician Hal Dearing visited the site under Andrew Schrader's direct supervision on 10/23/2024.

#### **PROJECT BACKGROUND ON PHASE 1 INSPECTIONS**

Recon Response Engineering LLC ("RRE") prepared this report to provide the Association with a Phase 1 Milestone Inspection in accordance with Florida Statute 553.899. The purpose is to attest to the life safety and adequacy of the structural components of the building and, to the extent reasonably possible, determine the general structural condition of the building as it affects its safety. This includes a determination of any necessary maintenance, repair or replacement of any structural component of the building. This does not include making a determination if the condition of the building is in compliance with the Florida Building Code or the fire safety code.

This inspection requires a visual examination of habitable and non-habitable areas of the building, including its major structural components. It is a qualitative (non-quantitative) assessment of the building's structural condition, with a key goal to determine if substantial structural deterioration exists.

"Substantial structural deterioration" is defined in Florida Statute 553.899 as substantial structural distress that negatively affects a building's general structural condition and integrity. The term does not include surface imperfections such as cracks, distortion, sagging, deflections, misalignment, signs of leakage, or peeling of finishes unless the inspector determines that such surface imperfections are a sign of substantial structural deterioration

As stated in Florida Statute 553.899, if we find no signs of substantial structural deterioration to the building components under visual examination, then a Phase 2 inspection is not required. If, however, any substantial deterioration is identified during the Phase 1 inspection, then a Phase 2 inspection must be performed.

### **PROJECT BACKGROUND ON PHASE 2 INSPECTIONS**

The purpose of a Phase 2 inspection, if required, is to fully assess areas of structural distress in order to confirm that the building is structurally sound and safe for its intended use. Additionally, a Phase 2 inspection requires the inspector to recommend a program for fully assessing and repairing distressed and damaged portions of the building.

A Phase 2 inspection may involve destructive or non-destructive testing and may be as extensive or as limited as necessary to fully assess areas of structural distress. When determining testing locations, the inspector must give preference to locations that are the least disruptive and most easily repairable while still being representative of the structure.

### **ONCE THE INSPECTION IS COMPLETED**

Following both the Phase 1 and Phase 2 inspection, the inspector must submit a sealed copy of the inspection report with a separate summary of, at a minimum, its material findings and recommendations. This information must be furnished by the inspector to both the condominium association and to the building official of the local government which has jurisdiction. This signed and sealed inspection report must meet all the following criteria:

- 1) Indicate the manner and type of inspection forming the basis for the inspection report.
- 2) Identify any substantial structural deterioration, within a reasonable professional probability based on the scope of the inspection.
- 3) Describe the extent of such deterioration and identify any recommended repairs for the observed deterioration.

- 4) State whether unsafe or dangerous conditions, as those terms are defined in the Florida Building Code, were observed.
- 5) Recommend any remedial or preventive repair for any items that are damaged but are not substantial structural deterioration.
- 6) Identify and describe any items requiring further inspection.

#### **APPLICABLE DEFINITIONS FROM THE FLORIDA BUILDING CODE**

"Unsafe" is defined in the 2020 Florida Building Code, 7th Edition, as follows:

Buildings, structures or equipment that are unsanitary, or that are deficient due to inadequate means of egress facilities, inadequate light and ventilation, or that constitute a fire hazard, or in which the structure or individual structural members meet the definition of "Dangerous," or that are otherwise dangerous to human life or the public welfare, or that involve illegal or improper occupancy or inadequate maintenance shall be deemed unsafe. A vacant structure that is not secured against entry shall be deemed unsafe.

"Dangerous" is defined in the 2020 Florida Building Code, 7th Edition, as follows:

Any building, structure or portion thereof that meets any of the conditions described below shall be deemed dangerous:

- 1) The building or structure has collapsed, has partially collapsed, has moved off its foundation, or lacks the necessary support of the ground.
- 2) There exists a significant risk of collapse, detachment or dislodgement of any portion, member, appurtenance or ornamentation of the building or structure under service loads.

Note that the Florida Building Code has a specific definition for "substantial structural damage" which is separate and distinct from the definition of "substantial structural deterioration" as used in Florida Statute 553.899. Since this report is predicated on the specific requirements of Florida Statute 553.899, the criterion for substantial structural deterioration is used in this report as defined in Florida Statute 553.899.

### **WHAT THE ASSOCIATION MUST DO WITH THIS INFORMATION**

- 1) The Association must distribute a copy of the inspector-prepared summary of the inspection report to each condominium unit owner or cooperative unit owner, regardless of the findings or recommendations in this report, by United States mail or personal delivery and by electronic transmission to unit owners who previously consented to receive notice by electronic transmission.
- 2) The Association must post a copy of the inspector-prepared summary of the inspection report in a conspicuous place on the condominium or cooperative property.
- 3) The Association must publish the full report and inspector-prepared summary on the Association's website if the Association is required to have a website.

We also recommend consultation with the Association's legal counsel to determine what other actions (if any) should be taken.

- 1) Pinellas County Property Appraiser Records
- 2) Pinellas County Construction Permit Records

### **BUILDING INFORMATION**

The structure located at 9 Turner St. consists of eight (08) units. The adjacent buildings at 15 Turner street consist of six (6) units.

The building at 9 Turner St. is four (4) stories tall over a crawlspace, and the structural components consist of reinforced concrete beams, slabs, and columns with infill Concrete Masonry Unit (CMU) block walls. The exterior walls are reinforced concrete block. The homes at 15 Turner St. are three (3) stories tall.

The main roof system is composed using a modified bitumen asphalt membrane with secondary roof(s) using a (Mod Bit) system.

The structure was built in 1979 according to Pinellas County Property Appraiser Records.

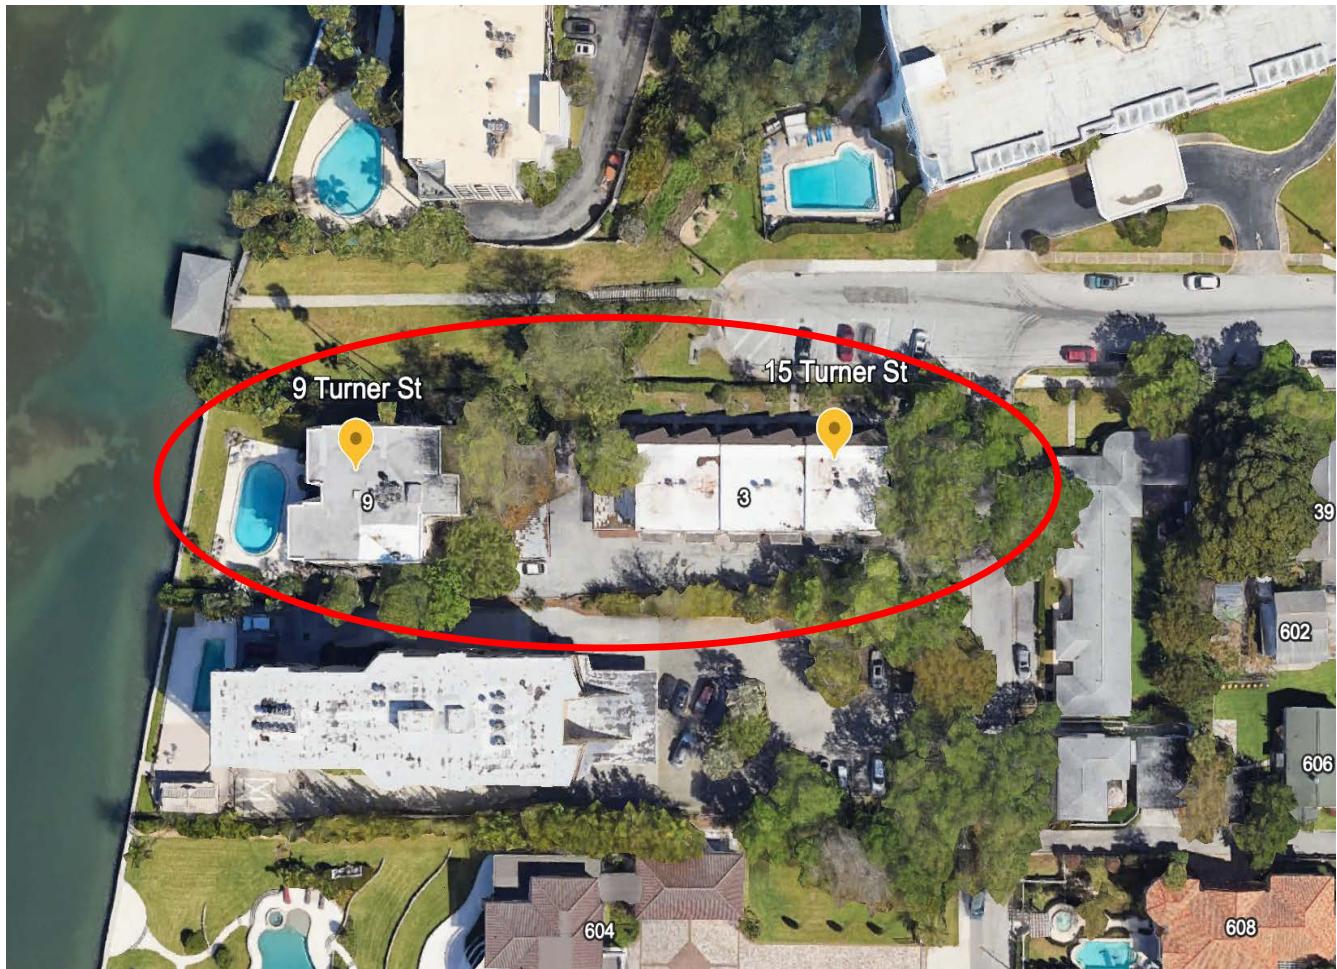

The buildings at 15 Turner Street are three (3) stories tall, and the structural components consist of Concrete Masonry Unit (CMU) block walls with a low-slope "flat" roof membrane, likely TPO or similar.

Photos showing the layout of the building are provided on the following pages.

## **INSPECTOR CREDENTIALS**

Andrew Schrader is a Florida-licensed Professional Engineer (PE) and Certified General Contractor (CGC).

He is board-qualified as a Special Inspector of Threshold Buildings (SI) by the Florida Board of Professional Engineers and accredited as a Florida Board Recognized Structural Engineer (**FRSE**).

In addition, Mr. Schrader holds the following credentials:

### **International Code Council (ICC)**

- Special Inspector, Soils
- Special Inspector, Structural Steel and Bolting
- Special Inspector, Structural Masonry
- Residential Mechanical Inspector, Residential Electrical Inspector
- Property Maintenance and Housing Inspector
- ADA Accessibility and Plans Review

### **American Concrete Institute (ACI):**

- Special Inspector, Concrete Construction
- Concrete Field-Testing Technician - Grade I

### **Association for Materials Protection and Performance (AMPP) / National Association of Corrosion Engineers (NACE)**

- Basic Coatings Inspector / CIP Level 1

### **State of Florida**

- Licensed Asbestos Consultant
- Certified Continuing Education Instructor, Florida Department of Business and Professional
- Regulation (DBPR)
- Certified Continuing Education Instructor, Florida Division of State Fire Marshal

### **U.S. Army Corps of Engineers**

- Urban Search and Rescue (US&R) Structures Specialist (StS-1)

### **U.S. Department of Transportation, Federal Aviation Administration (FAA)**

- Commercial Pilot (Instrument-Rated)
- Remote Pilot (Small Unmanned Aircraft Systems)

### MILESTONE PHASE 1 INSPECTION RESULTS: Hickory Grove Condominiums

**Required Item 1 of 6:** *Indicate the manner and type of inspection forming the basis for the inspection report.*

This Phase 1 milestone inspection was performed using visual observation of accessible locations. We walked the property on foot including the ground-floor perimeter, flat roofs, walkways, stairwells and approximately 25% of the unit interiors and balconies.

**Required Item 2 of 6:** *Identify any substantial structural deterioration, within a reasonable professional probability based on the scope of the inspection.*

No substantial structural deterioration was observed. The buildings are in good structural condition. A Phase 2 inspection is not required.

**Required Item 3 of 6:** *Describe the extent of such deterioration and identify any recommended repairs for the observed deterioration.*

Not applicable. No substantial structural deterioration observed.

**Required Item 4 of 6:** *State whether unsafe or dangerous conditions, as those terms are defined in the Florida Building Code, were observed.*

- 1) No unsafe or dangerous conditions were observed.

# RECON R RESPONSE

ENGINEERING

**Required Item 5 of 6:** Recommend any remedial or preventive repair for any items that are damaged but are not substantial structural deterioration.

- 1) Generally speaking, the buildings at 9 Turner St. and 15 Turner St. are due for an exterior painting and weatherproofing project. Stucco and façade cracking was observed throughout the exterior envelope, which can be remediated during the painting project.
- 2) Long-term water intrusion noted in elevator room at 9 Turner Street due to below-grade location. This is deteriorating the exterior walls of the area and will likely require structural repair and application of below-grade waterproofing. See Page 7/85 in Photo Appendix.
- 3) URGENT-Exterior guardrail outside front entrance to 9 Turner Street is loose and requires re-attachment. See Page 9/85 in photo appendix.
- 4) Exterior brick façade of 9 Turner St. is aging and requires repair in multiple locations. See Page 11,14/85 in Photo Appendix.
- 5) Foundation wall at crawlspace exterior, North elevation of 9 Turner Street requires concrete repair to prevent erosion of soil under foundation. See P. 15/85 of photo appendix.
- 6) URGENT-Electrical component housings at 9 Turner St., front east elevation require replacement due to corrosion. Ref. p. 17/85 photo appendix.
- 7) Waterproof balcony coatings of 9 Turner Street are in varying conditions due to unit owners installing coatings at different times. The coatings on the majority of balconies are wearing away and a reapplication of waterproof coating is required. This will likely require the existing coatings to be stripped down to bare concrete.
- 8) URGENT-The wood frame enclosures on the front elevation of 9 Turner Street are in need of repair and in general are approaching the end of their useful lives. At a minimum, the wood post at outside corner of Unit 5 is in immediate need of repair. The others should be examined by a General or Building Contractor (CGC or CBC) and repaired as needed. Ref. page 78/85 of photo appendix.

**Required Item 6 of 6:** Identify and describe any items requiring further inspection.

- 1) Due to the age of the building and exposure to the harsh coastal environment, we would recommend re-inspection by an Engineer within five (5) years of the date of this report. This does not need to be a milestone inspection. A simple Visual Survey of Existing Conditions can be performed.

THIS SECTION IS A SUMMARY

REVIEW PHOTO APPENDIX FOR COMPLETE PHOTOS AND OBSERVATIONS.
